Year-by-Year Breakdown

⚠ Pre-2020 caveat: CPI was a non-event during the pre-inflation era. Max NQ range 30min in 2016 = 16.5 pts, in 2017 = 51 pts. Stops ≥25 pts rarely or never filled. Data kept for full historical transparency, but NOT representative of the current regime (2022→). Recommended baseline: 2022 onwards.

☐ Group by Stop

Combo: Stop 25 / TP 15 

Year	Count	Fill % ?	TP Hit % ?	Avg PnL/ev ?	Worst PnL ?	Worst DD ?
2016	8	0%	0%	0	0	0

Year	Count	Fill % ?	TP Hit % ?	Avg PnL/ev ?	Worst PnL ?	Worst DD ?
2017	11	9.09%	9.09%	1.36	0	3.75
2018	12	33.33%	16.67%	2.29	-5	26.5
2019	12	8.33%	0%	-0.9	-10.75	14
2020	11	72.73%	36.36%	-1.77	-61	63.75
2021	19	63.16%	52.63%	6.87	-23	44
2022	24	87.5%	62.5%	-0.85	-159.75	172.5
2023	24	83.33%	45.83%	2.8	-60.5	128.25
2024	23	86.96%	56.52%	3.46	-51.25	68.75
2025	21	90.48%	76.19%	8.83	-23.75	100.75
2026	8	100%	75%	11.78	-4.25	47.5

Definitions

Fill rate: % of CPI events where buy stop or sell stop got triggered.

TP Hit rate: % of events where take profit was reached after fill.

No Fill rate: % where neither stop triggered (no trade).

Expired %: percentage of events where the buy/sell stop got triggered (filled) but the TP was never reached → trade was force-closed at the 30-minute mark, usually at a loss. High Expired % = strategy enters trades that don't follow through.

Avg PnL/event: average points P&L across ALL events (including no-fill = 0).

Avg PnL when filled: average points P&L only counting events where a fill occurred.

Worst PnL: worst single-event P&L in points (= biggest loss on 1 release).

Avg DD: average max drawdown from fill price during open trades.

Worst DD: worst max drawdown across all events (= did the account survive margin call).
