Legend

- **Range 1m** = high – low of the 1m release candle (8:30 ET for CPI/NFP).
- **Real Wick** = how many points NQ moved in the direction it ended up closing, measured from the price right before the release (1 second before 8:30 ET).
- **Manip Wick** = how many points NQ wicked the OTHER way first (the head-fake) before reversing into the real move, measured from the same pre-release price.
- If Manip Wick is small/zero, the release moved cleanly in one direction. If Manip Wick is large, NQ wicked hard against the direction first — classic stop-hunt pattern.
- Source: 1-second NQ bars (Databento).
