

NFP Straddle Backtest — Full-Port

114 releases · 42 combos · NQ 1m bars · No stop-loss · 30-min expiry

All NFP straddle combos are negative expectancy

40 of 42 combos show negative average PnL per event. This report documents **what does NOT work** on NFP. NFP moves are violent but the manipulation wick + bi-directional whipsaw prevents straddle strategies from being profitable across any tested offset/TP configuration. Use this as a reference to avoid, not to trade.

All Combos — Ranked by TP Hit Rate (red Avg PnL = losing combo)

Offset ?	TP	Fill % ?	TP Hit % ?	No Fill % ?	Expired % ?	Avg PnL/ev ?	Avg PnL filled ?	Worst PnL ?

Year-by-Year Breakdown

⚠ Pre-2020 caveat: NFP was a smaller NQ mover in the pre-inflation era. Max NQ range 30min in 2016 = 31.25 pts, in 2017 = 28.5 pts. Offsets ≥ 45 pts rarely or never filled. Data kept for full historical transparency. Recommended baseline: 2021 onwards (high-volatility regime).

☐ Group by Offset

Combo: Offset 70 / TP 50 ▼

Year	Count	Fill % ?	TP Hit % ?	Avg PnL/ev ?	Worst PnL ?
2016	8	0%	0%	0	0
2017	12	0%	0%	0	0
2018	12	0%	0%	0	0
2019	12	0%	0%	0	0
2020	11	18.18%	0%	-3.36	-39
2021	12	33.33%	16.67%	2.06	-57.75
2022	12	91.67%	58.33%	8.35	-130.5

2024	12	83.33%	50%	-3.42	-143.25
2025	8	87.5%	37.5%	19.84	-48
2026	3	100%	33.33%	-25.33	-123.75

Definitions

Fill rate: % of NFP events where buy stop or sell stop got triggered.

TP Hit rate: % of events where take profit was reached after fill.

No Fill rate: % where neither stop triggered (no trade).

Expired %: percentage of events where the buy/sell stop got triggered (filled) but the TP was never reached → trade was force-closed at the 30-minute mark, usually at a loss. High Expired % = strategy enters trades that don't follow through.

Avg PnL/event: average points P&L across ALL events (including no-fill = 0).

Avg PnL when filled: average points P&L only counting events where a fill occurred.

Worst PnL: worst single-event P&L in points (= biggest loss on 1 release).

Entry Offset: pts above/below release price where the buy-stop / sell-stop orders are placed. Higher offset = waits for a bigger initial move before entering.
